D-link dwa-121 wireless n150 driver download. D/link wireless n 150 usb adapter.

Aug 25 D-Link's DSL-2680 Wireless N 150 ADSL2+ Modem Router is the ideal Internet gateway for ADSL subscribers with basic Internet requirements. The DSL-2680 connects directly into the phone line to provide up to 24 Mbps download speed. The embedded Wireless N 150 technology with up to 150 Mbps makes it suitable for light Internet usage like browsing, emailing, banking and shopping. This article describes the configuration of the ADSL D-Link DSL-2680R a great modem / router product from D-Link which offers many attractive features such as support for ADSL Mbps downstream and up to 24 1 Mbps upstream (ADSL2 + Standards), the wireless until 54 Mbps and switches to 4 Ethernet ports integrated 10 / 100; connect the D-Link DSL-2680R as described below: Connect the power adapter to the connector on the rear panel of the device D-Link DSL-2680R and to the power outlet. The Power LED lights up. Insert one end of the Ethernet cable to the Ethernet port on the rear panel of the D-Link DSL-2680R and the Ethernet port of your computer. Open your browser (Internet Explorer, Mozilla, Firefox, Google Chrome, Safari, Opera) and enter the address Ip the modem in the address bar: 192.168.1.1 After clicking on "ENTER" or "SEARCH" will appear in the login window: inverire as username e password "admin" This will open the HOME where we're going to click on "Run Wizard" If we follow the Easy Setup, otherwise remaining in the ADSL SETUP ----> SETUP we can move the bottom of the page and click on MANUAL SETUP Now we can fill the screen shown below according to the configuration parameters suggested by our ISP if you do not remember what are you going next article Configuration Parameters At the end we save the configuration that we have created; at this point the D-Link DSL-2680R perform by itself is saving the reboot connecting directly to the Internet; we open our favorite browser and start surfing; the configuration is finished. Tags: DSL-2680R, Home Router, N150 Heads up: If you've got an old D-Link DSL modem/router, you'd better make sure its firmware is fully updated.(Image credit: D-Link/Amazon)That's because a cybercrime group is targeting four D-Link models, as well as several routers from other brands, and hijacking the routers' settings to send users to malicious websites. The attackers are using old known vulnerabilities for which fixes were issued years ago.Unfortunately, checking the version of a router's firmware and then updating the firmware is not that easy for most people. We'll walk you through the steps below, but we also strongly urge anyone with a router that's more than five years old to consider upgrading to a newer model.MORE: Best Wi-Fi RoutersThe four D-Link models targeted are the following, according to the security firm Bad Packets, which issued a report on the crime campaign yesterday (April 4):D-Link DSL-2640B (first sold in 2007)D-Link DSL-2740R (EU model, first sold in 2010)D-Link DSL-2780B (UK model, first sold in 2011)D-Link DSL-526B (Australia/New Zealand and EU, first sold in 2010)These are all combo DSL modem/routers, so if your DSL modem and router are different devices, or you use cable broadband instead of DSL, this warning doesn't apply.None of these listed models are still in production, but odds are they're still being used by someone, and many of those someone have never updated the firmware, or even changed the administrative passwords. (We've actually written about security problems with one of the D-Link routers before, and D-Link even cited our report in an advisory.)Four other brands are on the hit list: ARGTek (China), D-Link (apparently Brazil), Secutech (Venezuela) and TOTOLINK (China). None seem to have much presence in North America or Europe, although Amazon does sell some TOTOLINK models.How to (maybe) safeguard your D-Link routerAnyhow, if you do have a D-Link model on the list above, dig around to see if you still have the instruction manual and consult that to see how to check the settings.If not, open up a web browser on a computer connected to the router's Wi-Fi network and browse to . If you've never changed the admin settings, then log in to the router using the username "admin". Leave the password field blank. (These are terrible administrative credentials, and you should change them as soon as you can.)MORE: How to Update Your Router's FirmwareLook for two things: the router's firmware version, and the router's DNS settings. We can't give you generic instructions for every D-Link model here, since we don't have these models. But check tabs or pages marked "Advanced," "Tools" or "Status." Write down what you find.If your DNS settings are any of the following, there's a good chance that your router has been infected:66.70.173.48144.217.191.145195.128.126.165195.128.124.131You can evade the crooks temporarily by changing the DNS settings to use Google's DNS servers at 8.8.8.8 or 8.8.4.4. But you'll want to update the firmware too, and after that do a factory-reset.Go to D-Link's not terribly user-friendly download page at select your model prefix and number from the drop-down menus, and hit the Go button. See if there is firmware that is newer than what your model has, and click on it. (If not, time for a new router, which will be a lot easier to update.) Download the firmware package to you PC and pray that there are instructions included. (There may not be.)That's the best we can offer you right now for how to keep these older models secure. Once again, if you're still using one of these older models, you should really think about getting a new router. Something went wrong. Wait a moment and try again. The Dlink GO-RT-N150 router is considered a wireless router because it offers WiFi connectivity. WiFi, or simply wireless, allows you to connect various devices to your router, such as wireless printers, smart televisions, and WiFi enabled smartphones. Other Dlink GO-RT-N150 Guides This is the wifi guide for the Dlink GO-RT-N150.We also have the following guides for the same router: WiFi Terms Before we get started there is a little bit of background info that you should be familiar with. Your wireless network needs to have a name to uniquely identify it from other wireless networks. If you are not sure what this means we have a guide explaining what a wireless name is that you can read for more information. Wireless Password An important part of securing your wireless network is choosing a strong password. Wireless Channel Picking a WiFi channel is not always a simple task. Be sure to read about WiFi channels before making the choice. Encryption You should almost definitely pick WPA2 for your networks encryption. If you are unsure, be sure to read our WEP vs WPA guide first. Login To The Dlink GO-RT-N150 To get started configuring the Dlink GO-RT-N150 WiFi settings you need to login to your router. If you are already logged in you can skip this step. To login to the Dlink GO-RT-N150, follow our Dlink GO-RT-N150 Login Guide. Find the WiFi Settings on the Dlink GO-RT-N150 If you followed our login guide above then you should see this screen. This is the status page from your Dlink router. The wireless setup guide for the Dlink GO-RT-N150 router begins on the Home page. Start out by clicking Manual Setup near the bottom of the page. From there click Wireless Settings in the left hand sidebar. Then click Setup near the top of the page. Change the WiFi Settings on the Dlink GO-RT-N150 This is the wifi network page from your Dlink router. You should now see a page like the one you see above. Select the option of Manual Wireless Network Setup. This is the wifi security page from your Dlink router. This brings you to the page you see above. Start out by setting a Wireless Network Name. This will serve as your network identification and can be anything you like. However, due to security reasons we strongly recommend avoiding any personal information. To learn more check out our Wireless Names Guide. Next, disable the option labeled Enable Auto Channel Selection and open the drop down menu marked Wireless Channel. Set it to either 1, 6, or 11. Want to learn why these are the best options? Read our WiFi Channels Guide to find out. Set the Security Mode to Enable WPA/WPA2 Wireless Security (enhanced). If this is not an option we strongly recommend that you update your firmware. For more information check out our WEP vs. WPA Guide. Make sure that the Cipher Type is set to AES. Lastly you'll need to set a Network Key. This will be your network password and can be anything you like. However keep in mind that a strong password consists of 14-20 characters and includes no personal information. For more help take a look at our Choosing a Strong Password Guide. Congratulations! You're finished. Just be sure to save your changes before closing the page. Possible Problems when Changing your WiFi Settings After making these changes to your router you will almost definitely have to reconnect any previously connected devices. This is usually done at the device itself and not at your computer. Other Dlink GO-RT-N150 Info Don't forget about our other Dlink GO-RT-N150 info that you might be interested in.
